Keyboard shortcuts in Excel

Excel for Office 365, Excel for Office 365 for Mac, Excel for the web, Excel 2019, [More...](#)

Many users find that using an external keyboard with keyboard shortcuts for Excel helps them work more efficiently. For users with mobility or vision disabilities, keyboard shortcuts can be easier than using the touchscreen, and are an essential alternative to using a mouse.

Notes:

- The shortcuts in this topic refer to the US keyboard layout. Keys for other layouts might not correspond exactly to the keys on a US keyboard.
- A plus sign (+) in a shortcut means that you need to press multiple keys at the same time.
- A comma sign (,) in a shortcut means that you need to press multiple keys in order.

Ribbon keyboard shortcuts

The ribbon groups related options on tabs. For example, on the **Home** tab, the **Number** group includes the **Number Format** option. Press the Alt key to display the ribbon shortcuts, called Key Tips, as letters in small images next to the tabs and options as shown in the image below.

You can combine the Key Tips letters with the Alt key to make shortcuts called Access Keys for the ribbon options. For example, press Alt+H to open the **Home** tab, and Alt+Q to move to the **Tell me** or **Search** field. Press Alt again to see KeyTips for the options for the selected tab.

In Office 2013 and Office 2010, most of the old Alt key menu shortcuts still work, too. However, you need to know the full shortcut. For example, press Alt, and then press one of the old menu keys E (Edit), V (View), I (Insert), and so on. A notification pops up saying you're using an access key from an earlier version of Microsoft Office. If you know the entire key sequence, go ahead and use it. If you don't know the sequence, press Esc and use Key Tips instead.

Use the Access keys for ribbon tabs
